

# SATURN Fiberglass Reinforced Polyester Pumps

HEAVY DUTY CONSTRUCTION

# **SATURN - Fiberglass Reinforced Polyester Pumps**

The Argal pumps of the new range Saturn are centrifugal, single stage and compliant to ANSI/ASME B73.1. Regulation. These pump are manufactured in FRP (fibre reinforced polyester) and do not need a protecting carcass or external frames to reinforce the structure.

Peculiar design and the intrinsic resistance of the material of construction confer to these pumps mechanical resistance comparable to that of the major metallic alloys. Use of different formulations of epoxy vinyl ester resins, extend the spectrum of chemical resistance of these pumps that are adequate and resistant to a large number of corrosive and moderately abrasive medias.

The Saturn pumps are a technical and economical alternative to metallic pumps made of special alloys and can be effectively applied in water treatment applications, water games, depuration of civil and industrial waste waters, and in general in productive processes deploying chemicals.

#### THE MANUFACTURING PROCESS

The Saturn pumps are produced completely by Argal in its plant located in Italy by RTM injection moulding techno-

By this process parts are manufactured in moulds where reinforcing layers of glass fibre matt are arranged prior to the injection of the resin.

The use of glass fibers in form of layer of tissue of different weight allows to reinforce the structure in the areas of most mechanical stress and at the same time offers an excellent chemical resistance of the surfaces wetted by the liquid pumped.

The thermoset resins, differently from thermoplastics materials, can not be re processed once catalyzed and this is a warrantee for better mechanical properties, thermal and dimensional stability and longer life.

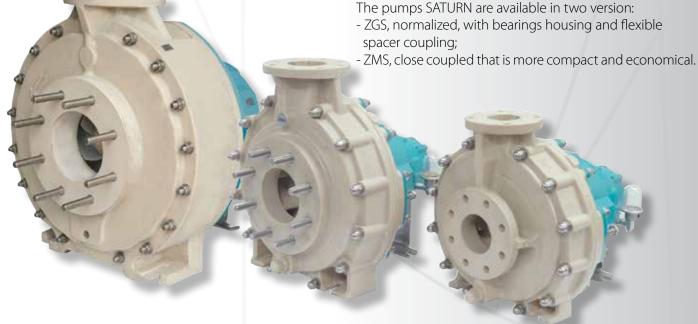

#### **APPLICATIONS**

FIBERGLASS RESIN	APPLICATIONS
V1G standard vinyl ester resin compound	General purpose
V1A vinyl ester resin compound	Abrasive liquids
V1C vinyl ester resin compound	Bleaches applications
V1F vinyl ester resin compound	Fluoridric applications

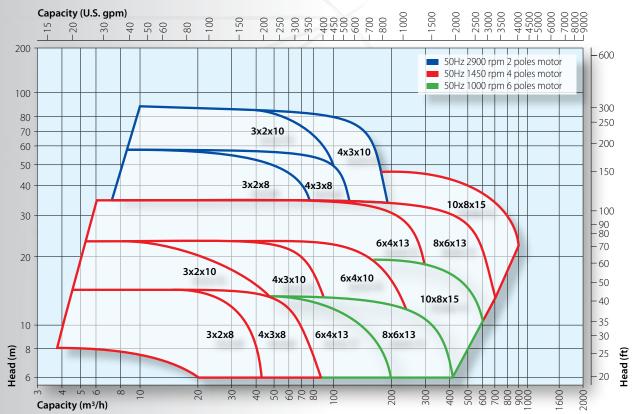

MARKET	APPLICATIONS				
Aquariums/Zoos	Salt water				
·	Acids				
Chemical Process	Chemical waste				
	Waste water				
	Filtration				
Desalination	Seawater In-take				
Desamation	Chemical Transfer				
	Concentrated Brine				
Electric Utilities	Coal pile run-off				
Flectronics	Acids				
Liectionics	Chemical waste				
	Chromic acids				
Metal Finishing	Pickling acids				
	Plating solutions				
Petrochemical	Acids				
retiochemical	Chemical waste				
Pharmaceutical	Organic Solvents				
Pulp and Paper	Bleach				
Mining	Abrasives and Corrosives				
Scrubbers/Odor Control	Acids and Caustics				

#### **DESIGN**

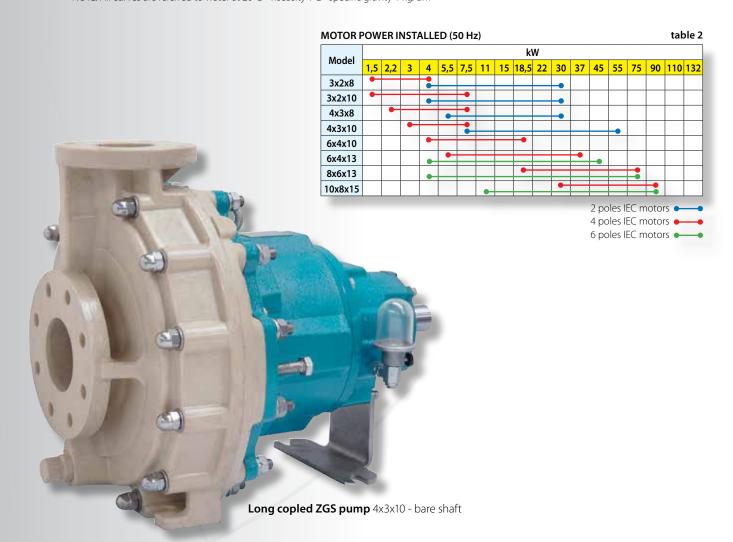

- spacer coupling;

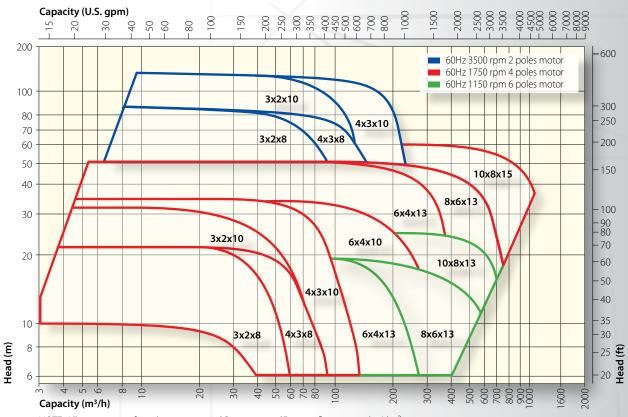

# **General Performance Curves 50 Hz**

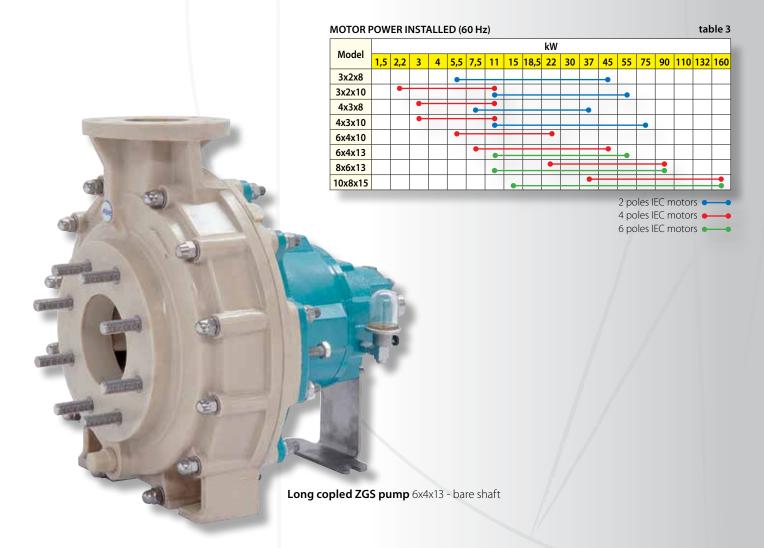

NOTE: All curves are referred to water at 20°C - viscosity 1°E - specific gravity 1 kg/dm<sup>3</sup>

#### Saturn ZGS

**ZGS**. The coupling of the pump to the motor by a flexible joint deliver a longer operative life to the mechanical part of the pump and is the preferred solution for heavy duty application and continuous use.

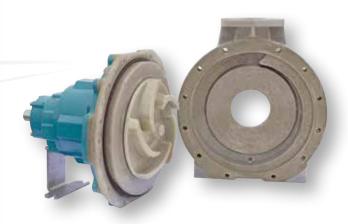

The flexible joint coupling allows maintaining the pump or the motor mounted on a mutual base plate, independently. The back pull-out construction allows to dismantle the support of the pump and some hydraulic parts subjected to periodic inspection without disconnecting the casing from the piping of the plant or removing the electric motor from the base plate.

**Long coupled pump ZGS** - Pump and electric motor are assembled on a common FRP base plate (optional) and coupled by flexible joint. Guard plate is made of Stainless steel and directly assembled on to the pumps (doesn't need to be anchored to the base plate.)

**Back pull-out execution** - All the SATURN pumps with elastic coupling are equipped with the back pull out system that allows the dismantling of the internal and mechanic parts of the pump without disconnecting the casing from the fittings and without moving the motor.

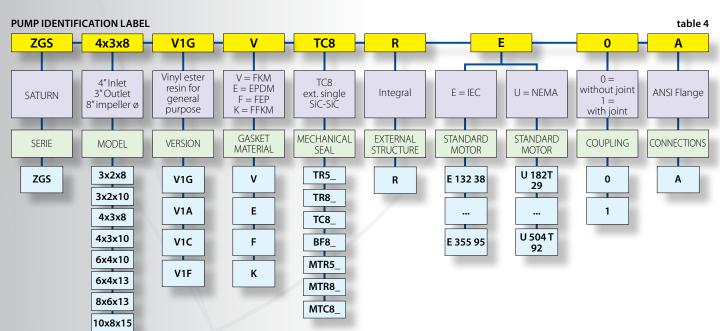

#### Detail of the volute casing

Depending from the model the volute casing can be manufactured with a simple volute or with a double volute. In the latter case the final section of the volute is partly divided in two independent section that reduce the radial loads on to the bearings and the transmission shaft.

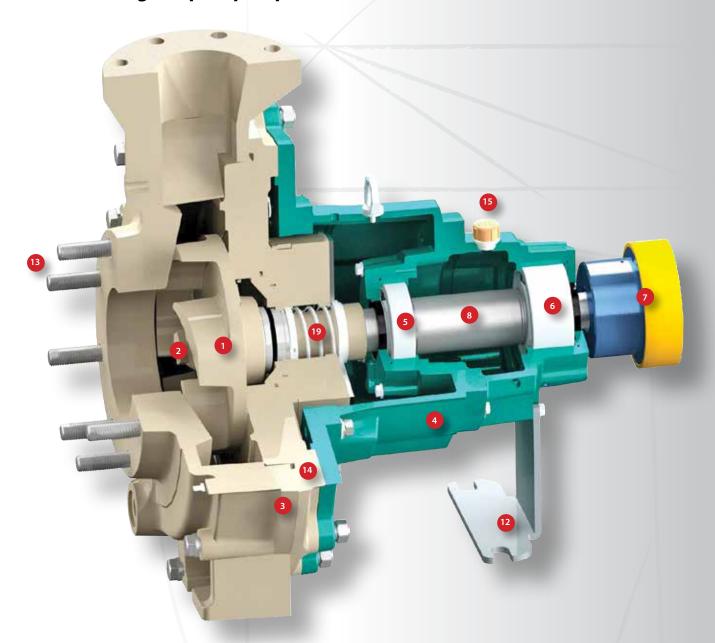

#### **Base plate**

Made of carbon steel profiles, painted with anti corrosion enamel and provided with a system to adjust the position of the motor and ease its alignment with the pump.

# Saturn ZGS long-coupled pump

#### 1 - Impeller

Centrifugal. Semi open type, with high efficiency vanes is manufactured by RTM injection as single piece with metallic core embedded.

#### 2 - Ogive

It is polyester made part with a stainless steel core embedded in the part when it is injected designed to lock the impeller permanently in its home position. It has a hexagonal shape compatible with a standard wrench.

#### 3 - Volute casing and rear casing

RTM Injection moulded in single piece without joints are extremely resistant.

The areas of the rear casing subjected to localise mechanical stress as flanges and supports are manufactured with peculiar design attentions.

#### 4 - Bearings housing and rear flange

Cast iron parts produced by a mechanised process. The support hosts the bearings' housing and the lubricant oil. The lantern located in intermediate position connects the support to the rear-casing flange.

#### 5 - Bearing pump side

Taper roller bearing to counter axial and radial loads.

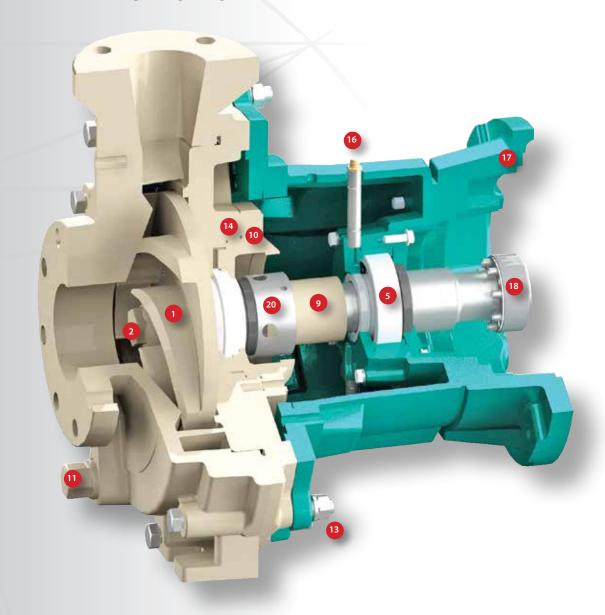

#### 6 - Bearing motor side

Double row ball bearing.

#### 7 - Flexible spacer coupling

Made of cast steel and single piece with crown in plastic polymer: It's complete with removable spacer to allow pulling out the pump for dis assembly purposes.

# Saturn ZMS close-coupled pump

#### 8 - Shaft

Is machined from a steel made bar and designed to resist to hydraulic loads and corresponding vibrations. Is totally protected by the shaft sleeve made of FRP.

#### 9 - Shaft Sleeve

Single piece without additional metallic parts.

#### 10 - Diaphragm

Manufactured in FRP, is designed to support the stationary part of the mechanical seal and it is easily replaceable if it fails.

#### 11 - Drain port

Optional.

#### 12 - Support foot

Made of stainless steel plate.

#### 13 - Locking bolts and tie rods Made of stainless steel.

#### 14 - O-ring gaskets FKM Standard.

15 - Oil fill plug.

- 16 Grease nipple.
- 17 Flanged adaptor.
- 18 Shrink disc.
- 19 BF8 mechanical seal.
- 20 TR5 mechanical seal.

# Saturn ZMS

**ZMS**. The clouse coupled construction, proposed for installed power up to 37 kW has also important functional advantages. The shaft of the pump is supported by a bearing located in the lantern: This bearing counters all the radial load of the shaft and by reducing its overhung section reduces the loads on the bearings of the electric motor contributing to extend their life. This solution is characterized by reduced overall dimensions and allows installing these pumps also in plants dimensioned for different devices.

#### Detail of the volute casing

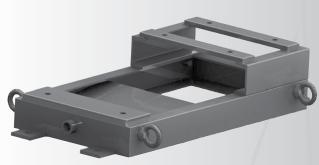

Depending from the model the volute casing can be manufactured with a simple volute or with a double volute. In the latter case the final section of the volute is partly divided in two independent section that reduce the radial loads on to the bearings and the transmission shaft.

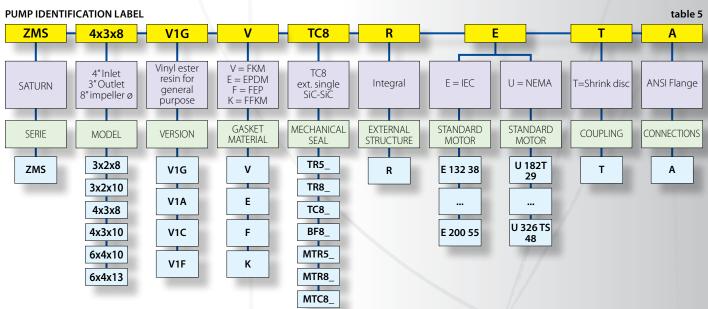

## Clouse coupled pump ZMS

Pump and electric motor are assembled directly.

### Base plate (optional)

Made of carbon steel profiles, painted with anti corrosion enamel.

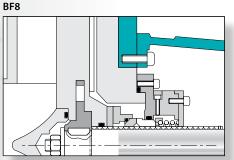

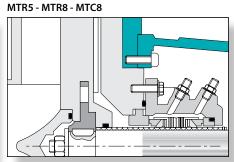

### **Mechanical Seals**

SATURN pumps can be installed with various types of mechanical seals, both those produced by ARGAL and those produced by other leading Manufacturers. These can be classified by type of installation (single internal or external, double fluxing) and by the materials used for the sliding parts and the packing. The metal parts are never in contact with the pumped fluid.

#### **SEAL FLUSHING ARRANGEMENTS**

All mechanical seals require flushing to lubricate the seal faces and maintain normal operating temperatures. Seals are normally flushed with either a clean external fluid or by the liquid being pumped.
